

Introduction to Anatomy and Physiology Assignment

Define the following:

Anatomy:

Physiology:

Disease:

Where did you get those definitions?

Identify a disease or condition to focus in for this assignment:

Why did you choose it?

Which organ system(s) does this disease/condition affect?

When that system is working normally, what function does it carry out?

Which organ(s) of that system does it affect?

How does the disease/condition work/affect the body?

Are there any treatments? Describe:
