

Excretory System

!

Directions: Please, answer the following questions in the space provided. Thank You.

1. Identify the life process that yields the waste products excreted by the lungs. Identify both of the waste products as well.
2. Name another organ of the excretory system and what excretory compound(s) it excretes
3. Where are *nephrons* and what happens there?
4. What type of blood vessel would you expect to be associated with nephrons? Why does that association make sense?
5. Where is *urea* formed? What is it made from?
6. What makes up urine?
7. What is the difference between *egestion* and *excretion*?
